

# ExecuteCmd

The command to be executed when the hyperlink is clicked.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.ExecuteCmd", Text)
```

## Values

*Text* can contain anything.

**Default:** ""

## Remarks

The ExecuteCmd property allows you to define the website, email address, file, or executable to run when the hyperlink is clicked. This should be any URL specified location. See the code below for examples.

## Example

```
// website
Set_Property(@Window:".OLE_HYPERLINK", "OLE.ExecuteCmd", "http://www.srpcs.com")

// email
Set_Property(@Window:".OLE_HYPERLINK", "OLE.ExecuteCmd", "mailto:info@srpcs.com")

// executable
Set_Property(@Window:".OLE_HYPERLINK", "OLE.ExecuteCmd", "notepad.exe")

// file
Set_Property(@Window:".OLE_HYPERLINK", "OLE.ExecuteCmd", "file://word.doc")
```
