

Top

The position of the vertical scrollbar.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Top", Value)
```

Values

Value can be any positive or negative whole number:

Default: 0

Remarks

The Top property determines the current location of the vertical scrollbar. A value of zero indicates the scrollbar is all the way to the top.

Set this property to programmatically scroll the panel.

Example

```
// Get the current vertical scroll position
TopPos = Get_Property(@Window:".OLE_PANEL", "OLE.Top")

// Scroll 25 pixels to upward
Set_Property(@Window:".OLE_PANEL", "OLE.Top", TopPos - 25)
```
