

RemoveCtrls

Removes OI controls from the panel.

Version Introduced: 2.0.2

Syntax

```
rv = Send_Message(Ctrl, "OLE.RemoveCtrls", HandleArray)
```

Parameters

Parameter	Description
HandleArray	A dynamic array of OI control handles to remove from the panel

Remarks

The RemoveCtrls method removes one or more preexisting OI controls from the panel. Those controls, if they are found in the panel, are removed from the panel and placed back onto the OI form in their original positions.

The only parameter is a dynamic array of control handles to be remove. Each field (@FM delimited) is a window handle retrieved from the controls' HANDLE properties.

Example

```
CtrlArray = ""

// Get the handles to the label and editline
CtrlArray<-1> = Get_Property(@Window:".LABEL", "HANDLE")
CtrlArray<-1> = Get_Property(@Window:".EDITLINE", "HANDLE")

// Remove them, restoring them back to their original locations on the OI form
Send_Message(@Window:".OLE_PANEL", "OLE.RemoveCtrls", CtrlArray)
```
