

# Border

The control's border style.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.Border", OptionValue)
```

## Values

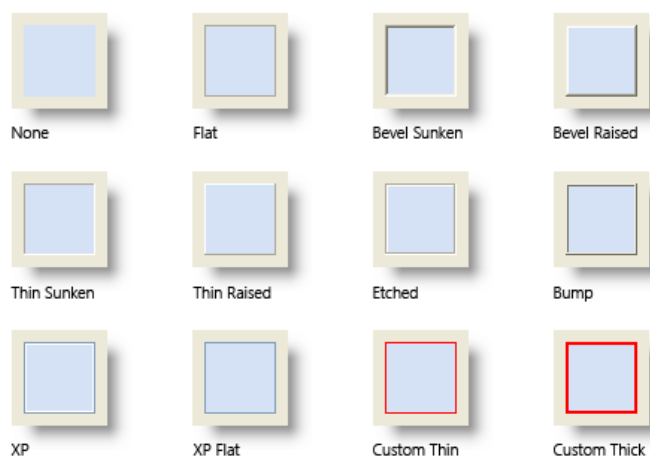

*OptionValue* can be set to one of the following valid options:

| Value        | Abbr. | Description  |
|--------------|-------|--|
| None         | N     | No border  |
| Bevel Sunken | BS    | A thick sunken border  |
| Bevel Raised | BR    | A thick raised border  |
| Thin Sunken  | TS    | A thin sunken border   |
| Thin Raised  | TR    | A thin raised border   |
| Etched       | ET    | An etched border   |
| Bump         | B     | A bumped border  |
| Flat         | F     | A thin system themed border  |
| XP           | X     | A 2-pixel border with a blue outline drawn in standard XP theme, or Bevel Sunken if XP themes are disabled |
| XP Flat      | XF    | A 1-pixel blue border drawn in standard XP theme, or Flat if XP themes are disabled                        |
| Custom Thin  | CTN   | A 1-pixel border of any color, which is determined by the <a href="#">BorderColors</a> property.           |
| Custom Thick | CTK   | A 2-pixel border of any color, which is determined by the <a href="#">BorderColors</a> property.           |

**Default:** None

## Remarks

The Border property establishes the kind of border to appear around the edges of the control. There are several types of borders as visualized below:

## Example

```
// Use the XP border  
Set_Property(@Window:".OLE_CONTROL", "OLE.Border", "XP")
```
