ScrollPos

The scrollbar positions.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ScrollPos", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Horizontal	Integer	The horizontal scrollbar position	0
<2>	Vertical	Integer	The vertical scrollbar position	0

Remarks

The ScrollPos property gets and sets the scroll bar positions. Set this property to programmatically scroll the image.

The ScrollPos property only works so long as the Layout property is set to "Pan".

Example

```
// Get the current scroll position
ScrollPos = Get_Property(@Window:".OLE_PICTURE", "OLE.ScrollPos")

// Scroll to position 10, 10
Set_Property(@Window:".OLE_PICTURE", "OLE.ScrollPos", 10:@FM:10)
```
