

# Zoom

The zoom level of the picture.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.Zoom", Value)
```

## Values

*Value* can be any positive or negative real number.

**Default:** 1.0

## Remarks

The Zoom property establishes the current image scale. A value of 1.0 scales the image at it's normal size. Increasing the value will make the image larger (zoom in). Decreasing the value will make it smaller (zoom out).

***The Zoom property only works so long as the [Layout](#) property is set to "Pan".***

## Example

```
// Double the image size
Set_Property(@Window:".OLE_PICTURE", "OLE.Zoom", "2.0")

// Zoom out
Set_Property(@Window:".OLE_PICTURE", "OLE.Zoom", "0.5")
```
