

# Animation

The animation used to show and hide the popup.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.Animation", OptionValue)
```

## Values

*OptionValue* can be set to one of the following valid options:

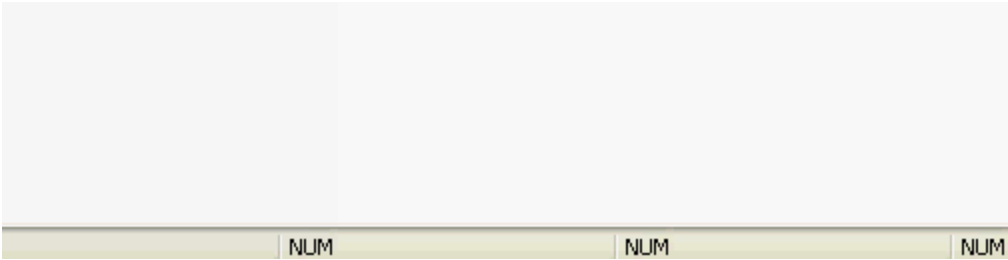

Value	Abbr.	Description
None	N	No animation, show/hide immediately
Fade	F	Fade In/Fade Out
Slide	S	Slide In/Out from Bottom
Unfold	U	Slide In/Out from Bottom Right corner

**Default:** None

## Remarks

The Animation property provides a means to customize how the popup appears. The default is "None", which shows and hides the popup immediately without any animation. You may choose between three other animation effects: "Fade", "Slide", and "Unfold".

Use the [AnimationDelay](#) property to set the animation timing.

## Example

```
// Fade the popup in/out
Set_Property(@Window:".OLE_POPUP", "OLE.Animation", "Fade")
```
