

AnimationDelay

The time it takes for the popup to show and hide.

Usage

```
Set_Property(OLECtrlEntID, "OLE.AnimationDelay", Value)
```

Values

Value can be any positive or negative whole number:

Default: 256

Remarks

The AnimationDelay is the time, in milliseconds, it takes the popup to appear or disappear. This property is used only if the [Animation](#) property is not "None". The default is 256, or about 1/4 of a second. Increase this value to slow down the animation or decrease it to speed it up.
