

Opacity

The level of opacity for the popup control.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Opacity", Value)
```

Values

Value can be any positive or negative whole number:

Default: 255

Remarks

The Opacity determines the level of translucency of the popup in its visible state. A value of 0 is completely transparent whereas a value of 255 (the default) is completely opaque.

Example

```
// Make the popup 50% translucent  
Set_Property(@Window:".OLE_POPUP", "OLE.Opacity", 127)
```
