

Size

The size and position of the popup.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Size", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	X Position	Integer	Horizontal position of the popup control relative to the right of the screen	0
<2>	Y Position	Integer	Vertical position of the popup control relative to the bottom of the screen	0
<3>	Width	Integer	The width of the popup	170
<4>	Height	Integer	The height of the popup	130

Remarks

The Size property defines the size and location of the popup control.

The first two fields define the location, X and Y. It is important to understand that these value are relative to the bottom right corner of the screen. In other words, a value of (0, 0) positions the popup such that it's bottom right corner is 0 pixels from the bottom right corner of the desktop.

The second two fields define the size, Width and Height. Simply increase or decrease these values as needed. Note that these value must be positive number. Negative numbers will result in undefined behavior.

Example

```
// Position the popup 16 pixels away from the bottom corner
Set_Property(@Window:".OLE_POPUP", "OLE.Size", 16:@FM:16)

// Set the width to 200 pixels
Set_Property(@Window:".OLE_POPUP", "OLE.Size", @FM:@FM:200)
```
