

# SRP\_Color OIToHex

Formats an OI color to '#rrggbb' format.

```
Hex = SRP_Color("OIToHex", Color)
```

## Returns

An OI color formatted in '#rrggbb' format.

## Remarks

The OIToHex service formats an OI color—which is internally formatted as an integer representing RGB color—making it suitable for use in HTML environments. This format is also a more human readable format suitable for storage.

## Examples

```
Color = RGB(255, 127, 0)  
Hex = SRP_Color("OI2Hex", Color)
```
