SelPos

The currently selected cell.

Usage

```
Set_Property(OLECtrlEntID, "OLE.SelPos", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Selected Field	Integer	The field location of the selected cell	1
<2>	Selected Record	Integer	The record location of the selected cell	1

Remarks

The SelPos property represents the currently selected cell. If no cell is selected, then both fields are -1. To programmatically select no cells, set both fields to -1.
