

# Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP Panel Control:

Method	Description	Version Introduced
<a href="#">AboutBox</a>	Displays the control's about box.	
<a href="#">AddCtrls</a>	Adds OI controls to panel.	
<a href="#">AddNamedForm</a>	Embeds an OI form by name so you can embed multiple forms.	<a href="#">4.0.2</a>
<a href="#">RemoveCtrls</a>	Adds OI controls to panel.	
<a href="#">RemoveAllNamedForms</a>	Removes all forms added via the AddNamedForm method.	<a href="#">4.0.2</a>
<a href="#">RemoveForm</a>	Removes the currently embedded form.	
<a href="#">RemoveNamedForm</a>	Removes a form by name.	<a href="#">4.0.2</a>
<a href="#">SetForm</a>	Embeds an entire OI form in the panel control.
