

ColumnAllowDrag

Determines if the user can drag the column.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ColumnAllowDrag[col]", Boolean)
```

Values

[True | False]

Default: True

Indices

Index	Description
col	The index to a column in the report table

Remarks

The ColumnAllowDrag property establishes whether or not the column can be dragged. By default, this is true, so the user can drag the column into a new position or the grouping panel to customize column order or grouping respectively. If you wish to prevent this, set the property to false.

Example

```
// Prevent users from dragging the third column
Set_Property(@Window:".OLE_REPORTTABLE", "OLE.ColumnAllowDrag[3]", 0)
```
