

# ColumnCount

The number of columns in the table.

## Usage

```
Value = Get_Property(OLECtrlEntID, "OLE.ColumnCount")
```

## Values

*Value* can be any positive or negative whole number:

## Remarks

The ColumnCount property returns the number of columns in the table. This count includes all columns, both visible and invisible. This is a read only property, so you cannot change the number of columns by setting this property to a new value.

## Example

```
// Get the current number of columns in the table  
NumCols = Get_Property(@Window:".OLE_REPORTTABLE", "OLE.ColumnCount")
```
