

ColumnHyperlink

Determines if the column has hyperlinks.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ColumnHyperlink[col]", Boolean)
```

Values

[True | False]

Default: False

Indices

Index	Description
col	The index to a column in the report table

Remarks

The ColumnHyperlink property determines whether or not the column has hyperlinks. If true, then each item's text in the column behaves like a hyperlink and fires the [OnItemHyperlink](#) event when clicked. If false, the text is displayed normally.

You can enable and disable hyperlinks on a per item basis using the [ItemHyperlink](#) property.

Example

```
// Hyperlinks on column 2, please
Set_Property(@Window:".OLE_REPORTTABLE", "OLE.ColumnHyperlink[2]", 1)
```
