

ColumnVisible

Determines if the column is visible to the user.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ColumnVisible[col]", Boolean)
```

Values

[True | False]

Default: True

Indices

Index	Description
col	The index to a column in the report table

Remarks

The ColumnVisible property shows or hides a column. By default, columns are visible though they can be initialized to invisible in the [ColumnList](#) property. Set this property to false to hide a column. Note that hidden column still exist in memory, and you can modify its attributes and data just as though it were visible.

Example

```
// Hide column 2
Set_Property(@Window:".OLE_REPORTTABLE", "OLE.ColumnVisible[2]", 0)
```
