

ItemCheckBox

Determines if an item has a check box.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ItemCheckBox[col; record]", Boolean)
```

Values

[True | False]

Default: False

Indices

Index	Description
col	The index to a column in the report table
record	The index to a record in the report table

Remarks

The ItemCheckBox property shows or hides an item's check box. By default, the item is automatically given a check box if it's column's [ColumnCheckBox](#) property is true. If so, all newly added rows will get check boxes in that column. You can then use this property to selectively show or hide check boxes on a per item basis.

Just like the SRP EditTable Control, you must separate the column and record index by a semicolon, not a comma.

Example

```
// Hide the check box on row 10
Set_Property(@Window:".OLE_REPORTTABLE", "OLE.ItemCheckBox[2;10]", 0)
```
