

ItemChecked

An item's check box state.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ItemChecked[col; record]", Boolean)
```

Values

[True | False]

Default: False

Indices

Index	Description
col	The index to a column in the report table
record	The index to a record in the report table

Remarks

The ItemChecked property gets or sets the check box state of an item. You must pass the item's column and record position. This property 1 if the box is checked and 0 if not.

Just like the SRP EditTable Control, you must separate the column and record index by a semicolon, not a comma.

Example

```
// Determine if the item is checked
IsChecked = Get_Property(@Window:".OLE_REPORTTABLE", "OLE.ItemChecked[2;1]")

// Check item in record 10, column 3
Set_Property(@Window:".OLE_REPORTTABLE", "OLE.ItemChecked[3;10]", 1)
```
