

ItemText

An item's text.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ItemText[col; record]", Text)
```

Values

Text can contain anything.

Default: ""

Indices

Index	Description
col	The index to a column in the report table
record	The index to a record in the report table

Remarks

The ItemText property gets or sets the text of an item. Note that the text is in internal OI format. You must pass the item's column and record position.

Just like the SRP EditTable Control, you must separate the column and record index by a semicolon, not a comma.

Example

```
// Get an item's text
Text = Get_Property(@Window:".OLE_REPORTTABLE", "OLE.ItemText[2;1]")

// Set text for item in record 10, column 3
Set_Property(@Window:".OLE_REPORTTABLE", "OLE.ItemText[3;10]", "Hello, World.")
```
