

RecordListFormatted

The entire data contents of the table in it's original form, unsorted and not grouped, formatted using the column format settings. (ReadOnly)

Version Introduced: 3.0.3

Usage

```
Set_Property(OLECtrlEntID, "OLE.RecordListFormatted", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Row	Text	The contents of an entire row	""
<1, 1>	Column	Text	The contents of a cell in the row	""

Remarks

The RecordListFormatted property is functionally the same as the [RecordList](#) property; they both return the table's data unsorted and ungrouped. However, the RecordListFormatted property also formats the data according to the column's formats.

Example

```
// Read the table's contents, ungrouped and unsorted, but formatted
RecordDataFormatted = Get_Property(@Window:".OLE_RECORDTABLE", "OLE.RecordListFormatted")
```
