

# SelfPosOrdered

The list of indexes of the selected rows in selected order.

## Usage

```
Array = Get_Property(OLECtrlEntID, "OLE.SelPosOrdered")
```

## Values

Array has the following structure:

Pos	Name	Type	Description
<1>	Selected Row	<a href="#">Integer</a>	Index to a selected row

## Remarks

The SelfPosOrdered property is a special read only property designed to provide the list of selected rows in the order they were selected. This is in contrast to the [SelPos](#) property, which always returns the selection in ascending order. As with the [SelPos](#) property, the selected rows are @FM delimited.

***For this property to be useful, the [MultiSelect](#) property must be set to 1 or 2.***

## Example

```
// Get the list of selected rows in the order they were selected
SelPos = Get_Property(@Window:".OLE_RECORDTABLE", "OLE.SelPosOrdered")
```
