

Delete

Deletes a single row from the table.

Syntax

```
rv = Send_Message(Ctrl, "OLE.Delete", Row)
```

Parameters

Parameter	Description
Row	The index to the row to delete.

Remarks

The Delete method deletes a single row from the table. For this method, the current sort order of the table is taken into account. Deleting row 2, for example, will always delete the second row from the top, even if it's a group row.

Example

```
// Delete row 10  
Send_Message(@Window:".OLE_REPORTTABLE", "OLE.Delete", 10)
```
