

AppendLog

Description

Appends data to the log file associated with the indicated log object handle.

Syntax

```
rv = Logging_Services("AppendLog", objLog, LogData, IncomingRowDelimiter, IncomingColumnDelimiter, IgnoreColumnHeaders)
```

Parameters

Parameter	Description
<i>objLog</i>	[Required] Object handle to the log file.
<i>LogData</i>	[Required] Data to be appended to the log file.
<i>IncomingRowDelimiter</i>	[Optional] Delimiter used to separate each log row coming in. This allows incoming log data to have a different delimiter than what will be used in the log file. Default is the RowDelimiter used for appending the log data.
<i>IncomingColumnDelimiter</i>	[Optional] Delimiter used to separate each column value in the log data. This allows incoming log data to have a different delimiter than what will be used in the log file. Default is the column delimiter used to separate the log data or a comma if fixed widths only are indicated.
<i>IgnoreColumnHeaders</i>	[Optional] Boolean flag to indicate if the service should attempt to add column headers to an empty log file. Default is false.
