

# Questions and Answers

This landing page is designed to help you deal with questions that will naturally come up as you begin to use the SRP HTTP Framework to build APIs. Because we are trying to address questions you didn't even realize you had, these are not FAQs (*Frequently Asked Questions*). However, as new questions come up on our [discussion forum](#) or through our consulting sessions, we will update this list.

We've grouped our list based on three basic questions:

- **How...?** (e.g., *How do I add a property to a resource?*)
- **What...?** (e.g., *What is a resource?*)
- **Why...?** (e.g., *Why is HATEOAS important?*)
