

Version History

1.2.6

- Added support for WorkingDir field in INI file
- Added support for UNC paths all around
- Fixed bug where trial licenses were not recognized
- Fixed bug where evaluation mode would prevent OI from launching

1.2.5

- Updated to single instance logic to verify that oinsight.exe is running under the current user. If not, then single instance is not enforced.
- Updated single instance logic to check oinsight.exe's directory and compare it to the Launcher's directory. If the directories do not match, single instance is not enforced.
- Fixed command line paramaters not passing to OnLaunchAttempt event of the Launcher OCX control.
- Fixed command line paramaters getting parsed incorrectly when not using / and =

1.2.4

- Updated to swap SRPLicense.DL_ with SRPLicense.DLL before checking the tool's licensing.

1.2.3

- Added StrictSingleOIInstance property to INI file for only allowing one OINSIGHT.EXE process per machine.

1.2.2

- Fixed bug where splash screen wouldn't display entire image.

1.2.1

- Updated to no longer use SRPShared.dll at all.

1.2

- Removed SRPApplicationLauncher.exe dependency on SRPShared.dll
- Added support for HideBanner parameter
- Added support for CustomCaption parameter
- Added support for AdditionalParameters parameter
- Added ability to supply any number of commands via CommandN parameters.

1.1.3

- Updated Launcher to dynamically link to MFC libraries and to SRPShared.dll, greatly reducing EXE size

1.1.2

- Added TransparentColor flag to INI file to support user defined transparent colors in splash screen image.

1.1.1

- Added PreventExecution and PreventExecutionMessage flags to INI to support ability to prevent application launches during critical operations, such as backups.

1.1

- Added support for blended splash screens loaded from 32-bit BMP or PNG files.

1.0

- Initial Release
