

Version History

1.1.8

- Added SRP_Repos_Resolve_Entity so that support tools, like GetEntity, can find entities that only exist in the mobile repository.

1.1.7

- Fixed bug introduced in v1.1.3. If no event pointers were found in the mobile repository then SRP_RTP27_Procedures would never get called.
- Fixed by forcing the Repository function to be included in the RTP27 procedure list.
- Replace all uses of the POINT command with a regular assignment operator since POINT has been deprecated in OpenInsight 9.2.1.

1.1.6

- Added support to validate SRP_DISPLAY_MESSAGE.

1.1.5

- Added licensing support.
- Replace hardcoded 'Check_Serial' gosub with 'Do_License_Check' gosub

1.1.4

- Fix bug in Refresh_For_Changed_Entities when checking for errors.

1.1.3

- More code refactoring.
- Replace the Loop/Remove method with the Loop/[]/Col2 method for better performance. When selecting MD pointers to send to SRP_RTP27_Procedures only select OIEVENTEXE pointers since the program stack is getting cleared using Flush and GarbageCollect. This prevents a long delay when several stored procedures are in the mobile repository and all of them are getting reloaded using RTP27

1.1.2

- Automatically detach current mobile repository in the AttachMobileRepository method to make sure no open tables are left.
- Fix display of mobile repository items in the SRP Tree control when switching between mobile repositories.

1.1.1

- Modify SRP_RTP27_Procedures so OIEVENTEXE object code will be loaded.
- Update AddEntity and RemoveEntity methods to create new MD 'P' type pointers for OIEVENTEXE entites

1.1.0

- New major feature: Restore Entities.
- Refactored a lot of code, cleaned up variable name inconsistencies, fixed miscellaneous minor bugs.

1.0.3

- Add Refresh button to GUI.
- Fix VNAV errors in AddMDPointer and RemoveMDPointer methods.
- Added GetVersion property.

1.0.2

- Add support for OIREPORT entities (Super easy! Just added OIREPORT to the list of entity types to filter and added MOBREPOSREPORTS to the list of tables that get created.)

1.0.1

- Add support for EVENT source entities (support was there but the entity type was left out of the list of supported entities.)
- Added About button and message display

1.0.0

- Initial Release
- Complete support for GUI. Revamp error trapping and message display
- Add AppID argument for AddMDPointer method. When creating a 'P' pointer make sure the AppID is appended to the STPROCEXE KeyID for non-SYSPROG entities
- Add tooltips to the Button controls
