

# ConflictColor

The color used to show conflict zones.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.ConflictColor", Color)
```

## Values

*Color* can be any [Color](#) value.

**Default:** RGB{255, 0, 0}

## Remarks

The ConflictColor is the color used to show overlapping appointments. This color may be customized to meet your needs, or you may set this to "None" in order to remove conflict zones completely.

## Example

```
// Remove conflict zones
Set_Property(@Window:".OLE_SCHEDULE", "OLE.ConflictColor", "None")

// Set the conflict zone to green
Set_Property(@Window:".OLE_SCHEDULE", "OLE.ConflictColor", "RGB{0, 255, 0}" )
```
