EnableMouseMoveEvent

Determines if the OnScheduleMouseMove event should fire.

Usage

```
Set_Property(OLECtrlEntID, "OLE.EnableMouseMoveEvent", Boolean)
```

Values

[True | False]

Default: False

Remarks

The EnableMouseMoveEvent determines whether or not the control will intentionally fire the OnScheduleMouseMove event. Even if you qualify the event, this control will refuse to fire it until this property is set to 1. The reason is simple. Mouse move events occur very frequently and can consequently clog up OpenInsight's event queue.

Example

```
// Qualify the on mouse move event and make sure it's enabled
Send_Message(@Window:".OLE_SCHEDULE", "QUALIFY_EVENT", "OLE.OnScheduleMouseMove", 1)
Set_Property(@Window:".OLE_SCHEDULE", "OLE.EnableMouseMoveEvent", 1)
```
