

# Guides

Controls which guides are visible during drag and drop.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.Guides", OnOffList)
```

## Values

*OnOffList* has the following structure:

Pos	Name	Description
<1>	Start Time	If set to 1, a guide appears at the beginning of the appointment across the schedule.
<2>	End Time	If set to 1, a guide appears at the end of the appointment across the schedule.
<3>	Lead Time	If set to 1, a guide appears at the end of the appointment's lead time across the schedule.
<4>	Trail Time	If set to 1, a guide appears at the beginning of the appointment's trail time across the schedule.

## Remarks

The Guides property establishes whether or not helpful guides appear during drag and drop. These guides are single solid lines drawn across the schedule to make it easier to line an appointment up with other lines. You can show any of these lines or none of them, which is the default.

## Example

```
// Show start and eng guides only
Set_Property(@Window:".OLE_SCHEDULE", "OLE.Guides", 1:@FM:1:@FM:0:@FM:0)

// Show lead and trail guides only
Set_Property(@Window:".OLE_SCHEDULE", "OLE.Guides", 0:@FM:0:@FM:1:@FM:1)
```
