

OnDateChange

Fired when the user changes the date.

Parameters

Parameter	Description
Date	The new date

Remarks

The DateChange event is fired when the user changes the current date using the provided calendar. The Date parameter contains the new date in OI's internal date format.

Example

```
Transfer Param1 to Date

// Notify the user that they can't modify past appointments
If Date LT Date() then
    Msg(@Window, "You cannot modify past appointments")
end
```
