

OnTimeBlockDbClick

Fired when the user double clicks a time block.

Parameters

Parameter	Description
TimeBlockID	ID of the time block
Button	The button used to double click
Shift	Flag indicating whether or not the Shift key is pressed
Ctrl	Flag indicating whether or not the Control key is pressed

Remarks

The OnTimeBlockDbClick event fires when the user double clicks a time block. The TimeBlockID parameter provides the unique ID of the time block involved and can be used directly with any properties requiring a time block ID. The Button parameter provides the name of the button used to perform the double click while the Shift and Ctrl parameters provide the states of the Shift and Control keys respectfully.

Example

```
Transfer Param1 to TimeBlockID
Transfer Param2 to Button
Transfer Param3 to Shift
Transfer Param4 to Ctrl

// Open the time block form passing the ID to the CreateParam
Start_Window("DBW_TIMEBLOCK", "", TimeBlockID)
```
