

GroupFont

The font used to render group captions.

Usage

```
Set_Property(OLECtrlEntID, "OLE.GroupFont", FontArray)
```

Values

The *FontArray* structure uses the same formatting as the OpenInsight FONT property. Visit the [Font](#) common OLE property page for further documentation.

Default: Tahoma, 8 pt.

Remarks

The GroupFont property customizes the font used to draw group captions. By default, the font is defined by the current [Theme](#). However, you can use this property to modify the font to suit your needs.

The [Theme](#) property will redefine this font whenever it changes. Therefore, set this property after setting the [Theme](#) property.

Example

```
// Set the Group font to 18pt
Set_Property(@Window:".OLE_SHORTCUT", "OLE.GroupFont", @SVM:18)
```
