

# HotTrackStyle

The visual feedback when the mouse hovers over an item

## Usage

```
Set_Property(OLECtrlEntID, "OLE.HotTrackStyle", OptionValue)
```

## Values

*OptionValue* can be set to one of the following valid options:

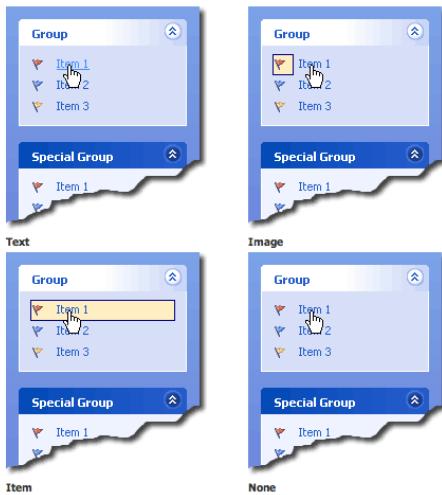

Value	Abbr.	Description
Default	D	Uses the Theme's default hot track style
Text	T	The text becomes underlined, but only if the mouse is over the text
Image	I	The image itself is surrounded by a selection rectangle
Item	T	The image and text are surrounded by a selection rectangle
None	N	Items do not respond to mouse hovering

**Default:** Default

## Remarks

The HotTrackStyle property is the visual style informing the user when item will respond when the mouse is clicked. In addition to the several styles available, you may specify the value "Default". When set to default, the hot track style used is determined by the theme established in the Theme property.

Here is a visual representation of the available hot track styles:

## Example

```
// Use a fixed hot track style
Set_Property(@Window:".OLE_SHORTCUTBAR", "OLE.HotTrackStyle", "Item")

// Use the theme's hot track style
Set_Property(@Window:".OLE_SHORTCUTBAR", "OLE.HotTrackStyle", "Default")

// Don't use any hot tracking
Set_Property(@Window:".OLE_SHORTCUTBAR", "OLE.HotTrackStyle", "None")
```
