

Layout

The layout of items within groups.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Layout", OptionValue)
```

Values

OptionValue can be set to one of the following valid options:

Value	Abbr.	Description
Default	D	Uses the Behavior's default layout
Images	I	Only item images appear and they are arranged left to right, then top to bottom
ImagesWithText	IT	Images appear with text to the right, arranged top to bottom and aligned to the left
ImagesWithTextBelow	ITB	Images appear with text beneath, arranged top to bottom and center aligned

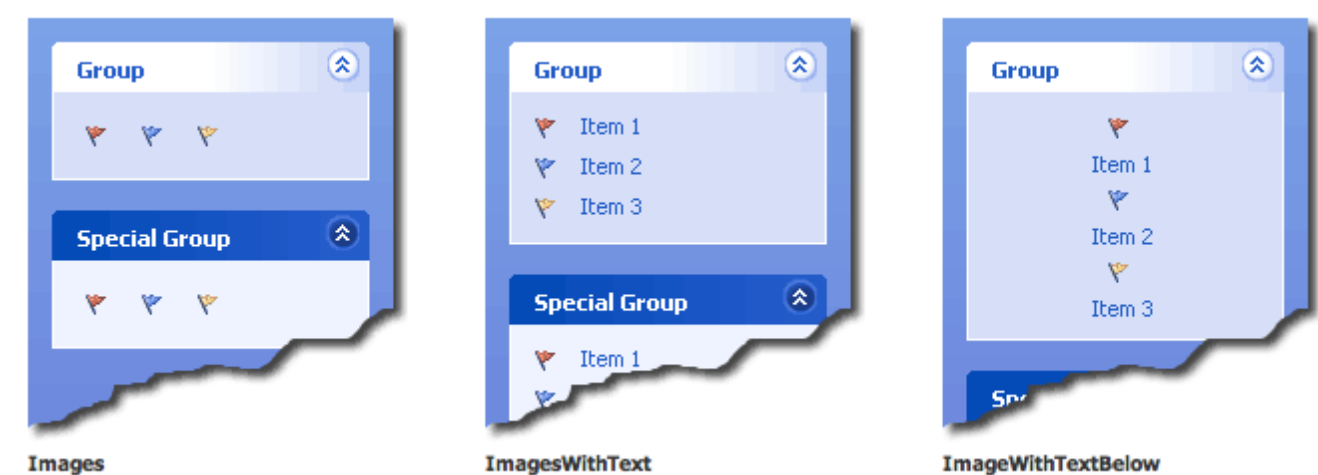

Default: Default

Remarks

The Layout property allows you to customize the arrangements of items within groups. This is a global property, so all groups will have the same layout.

First, note that one of the acceptable options is "Default", which uses the layout predetermined by the current value of the [Behavior](#) property.

The remaining values override the Behavior property's settings. Here is a visual chart showing the differences between the remaining options:

Example

```
// Set a custom layout
Set_Property(@Window:".OLE_SHORTCUTBAR", "OLE.Layout", "ImagesWithTextBelow")

// Let the Behavior property determine layout
Set_Property(@Window:".OLE_SHORTCUTBAR", "OLE.Layout", "Default")
```
