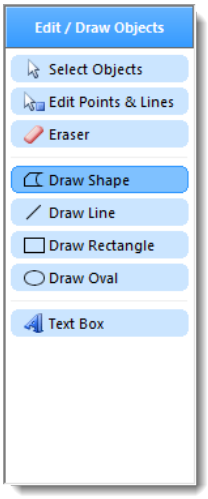
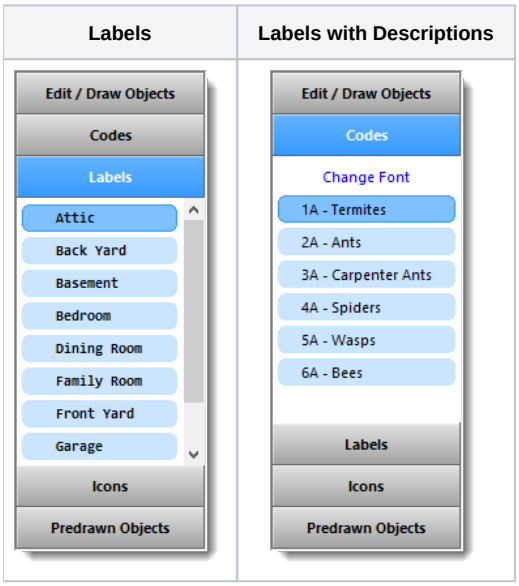
Setup

Setting up the SRP Sketch Control is easy. By default, there is a toolbar across the top of the control and a pane on the left called the General pane. It looks like this:

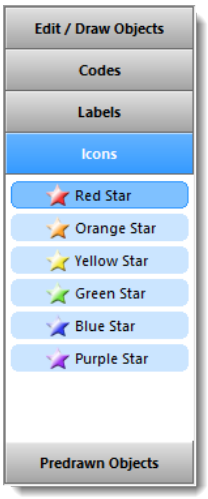


The first setup task, which is totally optional, is to add additional panes using the Panes property. This creates useful panes containing reusable labels, icons, or other objects.

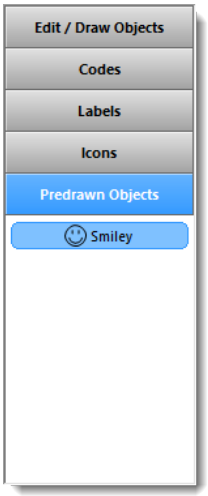
After you've created the panes, you need to populate them. Use the Labels property to populate your label panes:



Use the Icons property to populate your icon panes:



Finally, use the PredrawnObjects property to populate your predrawn objects pane.



That's it. Remember, this is more like a mini-application, so there isn't much to do in terms of setup.
