

MakeBitmap

Exports the sketch to a bitmap file.

Usage

```
SendMessage(OLECtrlEntID, "OLE.MakeBitmap", FilePath, DPI)
```

Parameters

Parameter	Description
FilePath	The path and filename of the bitmap to be created
DPI	The bitmap's resolution

Remarks

The MakeBitmap method exports the sketch to a bitmap image. Only the sketch will be exported, not the grid background. Instead, the background will be stark white.

Set the *FilePath* parameter to the file you want to create. Set the *DPI* parameter to a number representing the resolution in dots-per-inch. The resolution dictate the final size of the bitmap. For example, if you plan to print the image on a 600dpi printer, then set the parameter to 600.

Example

```
// Export a bitmap at 600 dots per inch
SendMessage(@Window:".OLE_SKETCH", "OLE.MakeBitmap", "Sketch.bmp", 600)
```
