

# ComboRowData

A control's selected combo box drop down row data.

## Usage

```
Array = Get_Property(OLECtrlEntID, "OLE.ComboRowData[CtrlId]")
```

## Values

Array has the following structure:

Pos	Name	Type	Description
<1>	Data	<a href="#">Text</a>	The data from a column in the selected row of the drop down list

## Indices

Index	Description
CtrlId	Identifies a subclassed control

## Remarks

Applies To: EDITLINE, EDITBOX

The ComboRowData is a useful property for getting all the data from the currently selected row of a control's combo box drop down list. Since the control can only contain a single value from the drop down list's selected row, you can use this property to get all the other columns in the row as well. The columns are delimited by field marks.

If there is no drop down selection, then this property is blank. If you need data from a non-selected row, use the [ComboData](#) instead.

## Example

```
// NOTE: using ; and not .
CtrlId = @Window:";EDITLINE"

// Get the full row's data from the combo box selection
RowData = Get_Property(@Window:".OLE_EDITTABLE", "OLE.ComboRowData[":CtrlId:]")
```
