

# OptionButton

Shows or hides an option button.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.OptionButton[CtrlId]", Boolean)
```

## Values

[True | False]

**Default:** False

## Indices

Index	Description
CtrlId	Identifies a subclassed control

## Remarks

Applies To: EDITLINE, EDITBOX

The OptionButton property shows or hides an option button in an EDITLINE control. By default, this option button looks just like a combo box drop down button. However, you may customize the button with any image you choose by setting the [OptionImage](#) property.

To respond to users clicking the option button, capture the [OnOptionClick](#) event.

## Example

```
// Subclass my editline control and add an option button to it
CtrlId = @Window:".EDITLINE"
Handle = Get_Property(CtrlId, "HANDLE")
rv = Send_Message(@Window:".OLE_SUBCLASS", "OLE.Subclass", Handle, CtrlId)
Convert "." to ";" in CtrlId
Set_Property(@Window:".OLE_SUBCLASS", "OLE.OptionButton[":CtrlId:"]", 1)
```
