

OnOptionClick

Fired when the user clicks on an option button in an edit line.

Parameters

Parameter	Description
CtrlId	Identifies a subclassed EDITLINE control

Remarks

The OnOptionClick event is fired when the user clicks on an edit line's option button. The CtrlId parameter identifies the control who fired the event. You can use this parameter in properties and methods to make any desired modifications in response to the event.

Example

```
Transfer Param1 to CtrlId

// Since my CtrlId is the same the OI Control Entity Name,
// I can use it to manipulate the OI properties as well
Set_Property(CtrlId, "TEXT", "Option Button Was Clicked")
```
