

OnSpinClick

Fired when the user clicks on a spin button in an edit line.

Parameters

| Parameter | Description |
|-----------|--|
| CtrlId | Identifies a subclassed EDITLINE control |
| Delta | The proposed change in position |

Remarks

The OnSpinClick event is fired when the user clicks on an edit line's spin button. The CtrlId parameter identifies the control who fired the event. You can use this parameter in properties and methods to make any desired modifications in response to the event. The Delta parameter will be 1 if the user clicked the up arrow and -1 if the user clicked the down arrow.

Example

```
Transfer Param1 to CtrlId
Transfer Param2 to Delta

// Since my CtrlId is the same the OI Control Entity Name,
// I can use it to manipulate the OI properties as well
Val = Get_Property(CtrlId, "TEXT")
Val = Val + (0.1 * Delta)
Set_Property(CtrlId, "TEXT", Val)
```
