

SelectFont

The font used to render only the selected tab's caption.

Usage

```
Set_Property(OLECtrlEntID, "OLE.SelectFont", FontArray)
```

Values

The *FontArray* structure uses the same formatting as the OpenInsight FONT property. Visit the [Font](#) common OLE property page for further documentation.

Default: Tahoma, 8 pt.

Remarks

Set this property to change the font used to render the selected tab's caption. All other tab captions will use the [Font](#) property.

Example

```
// Set the selection font to bold
Set_Property(@Window:".OLE_TAB", "OLE.SelectFont", @SVM:@SVM:700)

// Set the selection font to be the same as the other tabs
Font = Get_Property(@Window:".OLE_TAB", "OLE.Font")
Set_Property(@Window:".OLE_TAB", "OLE.SelectFont", Font)
```
