

# AddTab

Adds a tab to the control.

## Syntax

```
Handle = Send_Message(Ctrl, "OLE.AddTab", Caption, Image, Enabled)
```

## Parameters

| Parameter | Description  |
|-----------|--|
| Caption   | The text to appear on the new tab                        |
| Image     | Path to the image to appear on the new tab               |
| Enabled   | Determines if the new tab is enabled (1) or disabled (0) |

## Returns

Handle to the new tab.

## Remarks

The AddTab method adds a new tab to the end of the tab control. You pass the caption, image, and initial enabled state of the new tab. This method returns a handle to the tab. A handle is a number that identifies this tab. You can use the [HandleToIndex](#) method to convert the handle to an index.

## Example

```
// Add a new tab and get its index
TabHandle = Send_Message(@Window:".OLE_TAB", "OLE.AddTab", "My New Tab", "BMPS\TabImage3.png", 1)
TabIndex = Send_Message(@Window:".OLE_TAB", "OLE.HandleToIndex", TabHandle)
```
