

# SRP\_Time IsAm

Determines if a time is in the AM.

```
IsAm = SRP_Time("IsAm", Time)
```

## Returns

1 if the time is in the AM, 0 if it is in the PM.

## Parameters

Parameter	Description
Time	A time in OI internal format. <b>(REQUIRED)</b>

## Remarks

The "IsAm" service returns 1 if the time is in the AM or 0 if it is in the PM. If an OI time represents 12:41:08pm, this service would return 0. If the given time not valid, 0 is returned. Therefore, it might be necessary to [Validate](#) the time if you want to ensure no false negatives.

## Examples

```
// Is the current hour in the AM?
IsAm = SRP_Time("IsAm", Time())

// Is the the current hour in UTC in the AM?
IsAm = SRP_Time("IsAm", SRP_Time("Now", 1))

// Is this hard coded time in the AM?
Hour = SRP_Time("IsAm", 56013)

// Is the string containing a time in the AM?
Time = SRP_Time("Parse", "12:41:08pm", "h:mm:ssstt")
IsAm = SRP_Time("IsAm", Time)
```
