

# SRP\_Time Encode

Creates a time from a given hour, minute, and second.

```
Time = SRP_Time("Encode", Hour, Minute, Second)
```

## Returns

An OI time.

## Parameters

Parameter	Description
Hour	A valid hour. 0 - 23. <b>(REQUIRED)</b>
Minute	A valid minute. 0 - 59. <b>(REQUIRED)</b>
Second	A valid second. 0 - 59 <b>(REQUIRED)</b>

## Remarks

The "Encode" service converts the components of a time into a time in OI's internal format. For example, if *Hour* is 12, *Minute* is 41, and *Second* is 8, this service will return 45668. If any of the parameters do not represent a valid time, then "" is returned.

## Examples

```
// Encode a time
Time = SRP_Time("Encode", 16, 4, 0)
```
