

Locale Name

Some routines, such as [SRP_Date](#), [SRP_Time](#), and [SRP_DateTime](#), use locale names to target a specific language. In such cases, SRP Utilities uses the language tagging conventions of Windows Vista and later. Instead of making you hunt down that information yourself, which is not in one tidy place, we explain what you'll need right here.

Locale names have a complex syntax that allow you to specify all aspects of a language, it's script, and the region, but in 99.99% of cases, you'll use "language-REGION" where "language" is a lowercase [ISO 639-1 language code](#) and "REGION" is an uppercase [ISO 3166-1 country/region identifier](#). "REGION" is optional. For example, the locale name for English is "en", the locale name for English (United States) is "en-US", and the locale name for French (Canada) is "fr-CA".

Instead of making you look up language and region codes individually, here is a list of the 200 most common languages and regions:
