# SRP_Date DayOfWeekNames

All the day of the week names in a given locale.

```
Name = SRP_Date("DayOfWeekNames", NameLength = "Full", Locale = "")
```

## Returns

The human readable names for all the days of the week.

## Parameters

| Parameter | Description |
|---|---|
| NameLength | How the names are to be returned: options are "Full", "Abbreviated", and "Shortest". *(OPTIONAL)* |
| Locale | A locale for culture specific names. *(OPTIONAL)* |

## Remarks

The "DayOfWeekNames" service retrieves the cultural specific names for all the days of the week in an @FM delimited array, with Monday being in position <1> and Sunday being in position <7>. The actual values returned depends on two factors: *NameLength* and *Locale*. *NameLength* can be on of three options: "Full" returns the full names, "Abbreviated" returns the commonly used abbreviations, and "Shortest" returns the shortest possible names without being ambiguous. *Locale* is the locale name used to target a specific language.

## Examples

```
// Get the full names in the local culture
Names = SRP_Date("DayOfWeekNames")

// Get the abbreviated names in the local culture
Names = SRP_Date("DayOfWeekNames", "Abbreviated")

// Get the abbreviated names in Spain
Names = SRP_Date("DayOfWeekNames", "Abbreviated", "es-ES")

// Get the shortest names in France
Names = SRP_Date("DayOfWeekNames", "Shortest", "fr-FR")
```
