SRP_Time AmName

The AM name for a given locale.

```
Name = SRP_Time("AmName", NameLength = "Full", Locale = "")
```

Returns

The cultural specific name for AM.

Parameters

Parameter	Description
NameLength	How the name is to be returned: options are "Full" or "Abbreviated". *(OPTIONAL)*
Locale	A locale for culture specific names. *(OPTIONAL)*

Remarks

The "AmName" service retrieves the cultural specific name for AM. The value returned depends on two factors: *NameLength* and *Locale*. *NameLength* can be on of two options: "Full" returns the longest AM name used in that culture and "Abbreviated" returns the culture's AM abbreviation. *Locale* is the locale name used to target a specific language.

Here is a sample of possible return values. The top row is the *Locale* value and the left column is the *NameLength* value:

	en-US	es-MX	fr-CA
Full	AM	a. m.	a
Abbreviated	a	a	a

Examples

```
// Get the AM name in the local culture
Name = SRP_Time("AmName")

// Get the abbreviated AM name in the local culture
Name = SRP_Time("AmName", "Abbreviated")

// Get the abbreviated AM name in Spain
Name = SRP_Time("AmName", "Abbreviated", "es-ES")
```
