3.x - SetSelfURL

Sets the self URL for the current service.

Syntax

```
Response = HTTP_Services('SetSelfURL', SelfURL)
```

Returns

N/A

Parameters

Parameter	Description
SelfURL	The self URL relevant to the current service. **Required**

Remarks

The self URL is the URL that identifies itself. It is typically returned in responses to serve as a self-referencing ID apart from other URLs that might be returned which direct the caller to other services.
