# 3.x - SetOECGIRequest

Sets the HTTP request that the OECGI creates to memory so it can be retrieved by later routines. This avoids the need to pass this around into various routines.

## **Syntax**

```
Response = HTTP_Services('SetOECGIRequest', Request)
```

### Returns

N/A

#### **Parameters**

Parameter	Description
Request	The @FM delimited array containing the HTTP request that OECGI passes in. Required.

### Remarks

This is used by the 3.x - HTTP\_MCP controller to store the @FM array from the OECGI into memory. There is no reason to use this service elsewhere.
